

## Specification

### Management Server:

Provides central control of images and policies. It is lightweight, secure, and scales to support thousands of users in many locations. It fully integrates with Active Directory (AD), so users can login with their AD credentials, and administrators can target existing AD groups with images or policies.

### LivePC:

A virtual machine running the desktop image. Images are updated dynamically and automatically, work anywhere, and can be deployed quickly. Because the LivePC images run locally, organizations can deploy quickly with minimal investment in infrastructure.

### Creator:

An authoring tool for creating LivePC images and updating existing LivePCs. IT administrators publish new and updated LivePCs to the Management Server for easy distribution.

### Player:

Runs LivePCs securely and privately, isolated from the host OS. LivePCs can run securely on any personal or unmanaged device—Mac, PC, or bare metal.
