

Specification

Key Features

- **Real-Time Monitoring:** Allows organizations to monitor network traffic in real-time to detect unusual patterns that could indicate issues such as congestion, performance degradation, or security threats.
- **Security Monitoring:** Integrates with security information and event management (SIEM) systems to provide insights into potential security incidents and threats.
- **Bandwidth Management:** Assists in optimizing bandwidth usage by identifying top consumers, thus allowing for better resource allocation and management.
- **Logging and Forensics:** Maintains logs of internet traffic to assist with investigations and compliance audits, providing historical data regarding network usage and potential incidents
- **Application Performance Monitoring (APM):** Measures the performance of specific applications to ensure they run optimally and meet user expectations.
- **Network Mapping:** Visualizes how traffic flows through the network, helping in identifying bottlenecks or areas needing optimization.
- **Compliance Monitoring:** Helps organizations meet regulations regarding internet usage and data protection by monitoring and reporting on compliance status.
